

Request for Applications (RFA) - Radiosensitivity Diagnostic Grant

Program Overview

This funding program aims to support collaborative research efforts that contribute to the validation and clinical implementation of a radiosensitivity predictive test, particularly in the field of personalized radiotherapy.

Eligibility

Applicants must be affiliated with academic, nonprofit, or clinical research institutions.

Collaborative projects involving multidisciplinary or international teams are welcome.

Funding Information

- Total Award Amount: Up to \$35,000 USD, inclusive of all direct and indirect costs.
- Project Duration: 4.5 months.
- Indirect Cost Rate (IDC): Capped at 15% of total direct costs.

This indirect cost policy applies uniformly to all partner institutions, regardless of geographic location.

Use of Funds

Funds may be used to support:

- Personnel costs (research staff, trainees)
- Supplies and materials
- Data analysis
- Study coordination and reporting
- Institutional fees in accordance with the 15% IDC limit

Application Process

Applications are submitted by invitation or direct coordination with the organizing team. All selected projects will receive formal notification and be required to sign a standard collaboration agreement prior to fund disbursement.
